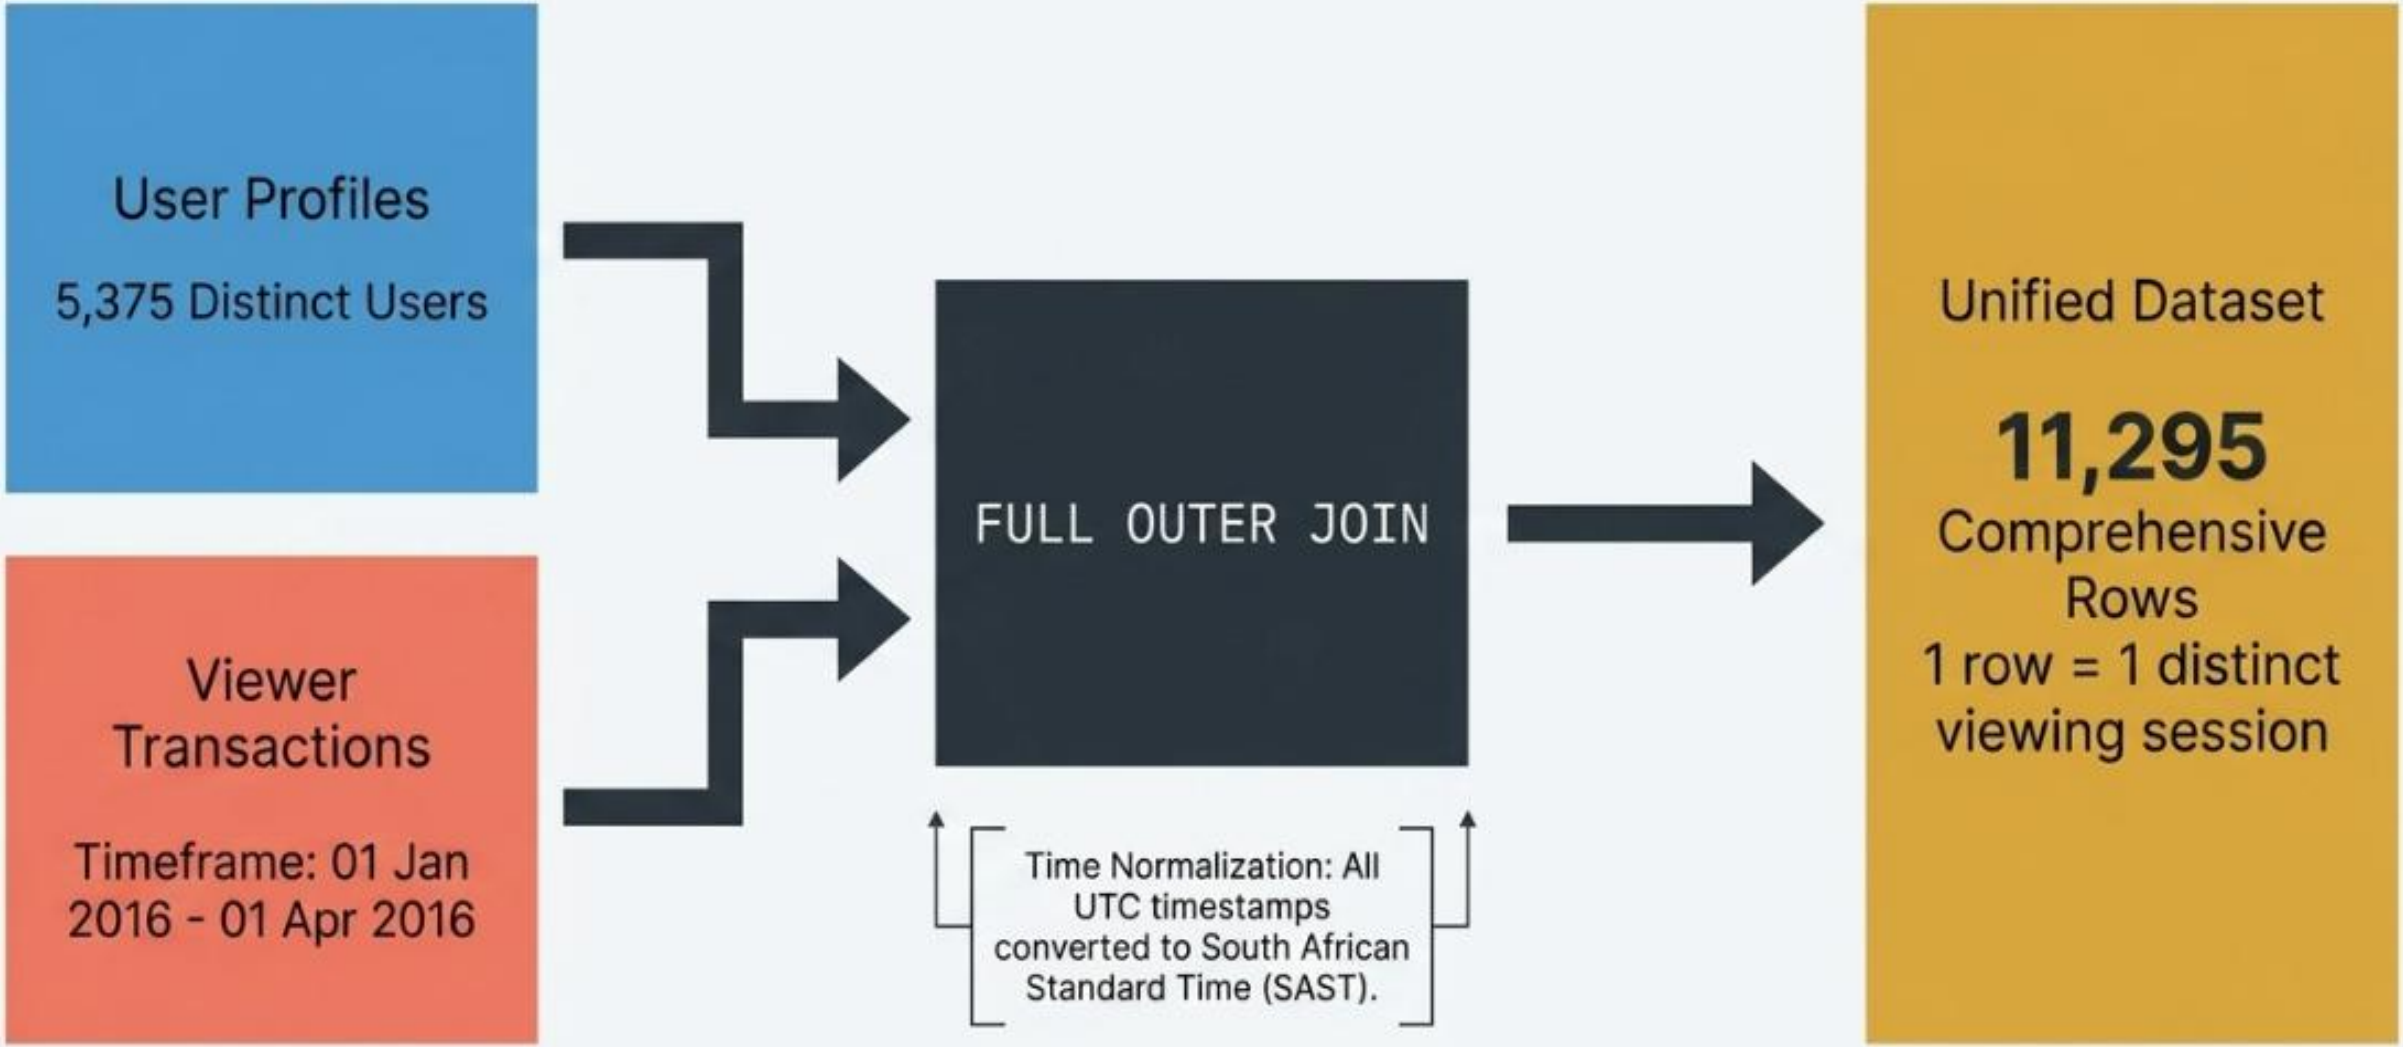
BRIGHT TV ANALYSIS.

Presentation by Andiswa Asanda Mchunu.

Establishing a Reliable Data Foundation



VIEWERSHIP PER PROVINCE

Gauteng

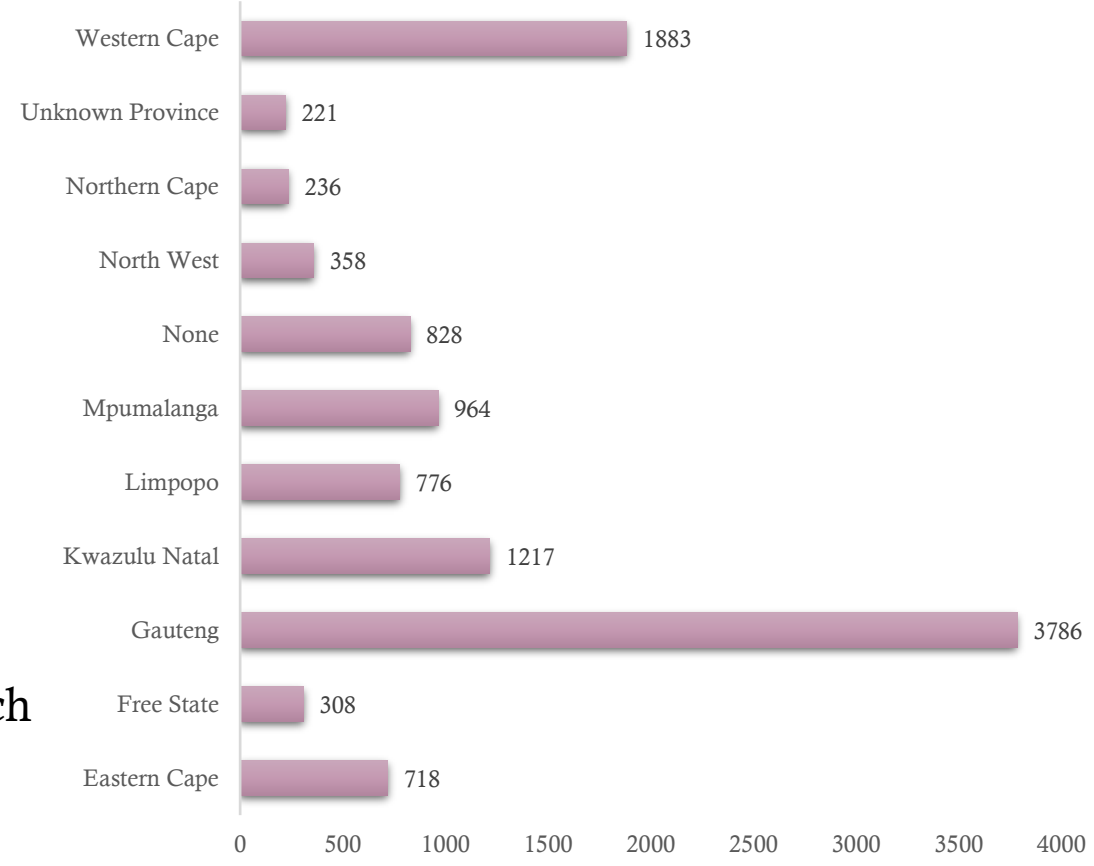
Has the highest number of viewers, in this case 3 786 viewers. This is because it has the highest population, housing approximately **15.9 million to 16.1 million people according to Stats SA.**

Northern Cape

Has the lowest number of viewers, in this case it is 236 viewers. This is because it is approximately housing 1.38 million people.

NULLS/ Nones

The sum of 1049 viewers where unaccounted for, as to which province are they from.

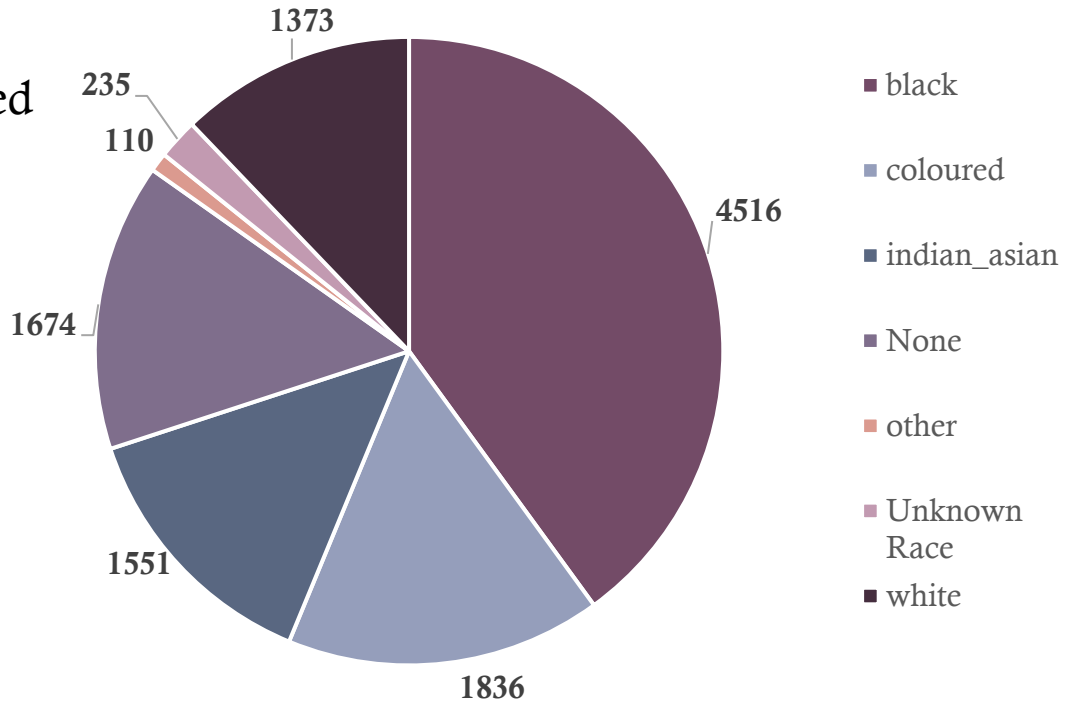


VIEWERSHIP BY RACE

Black people are leading with the total viewers that summed to 4516.

Other races that are not specified have the least number of viewers which is only 108

235 viewers are unaccounted for. The race is not known at all, hence it was **null**.

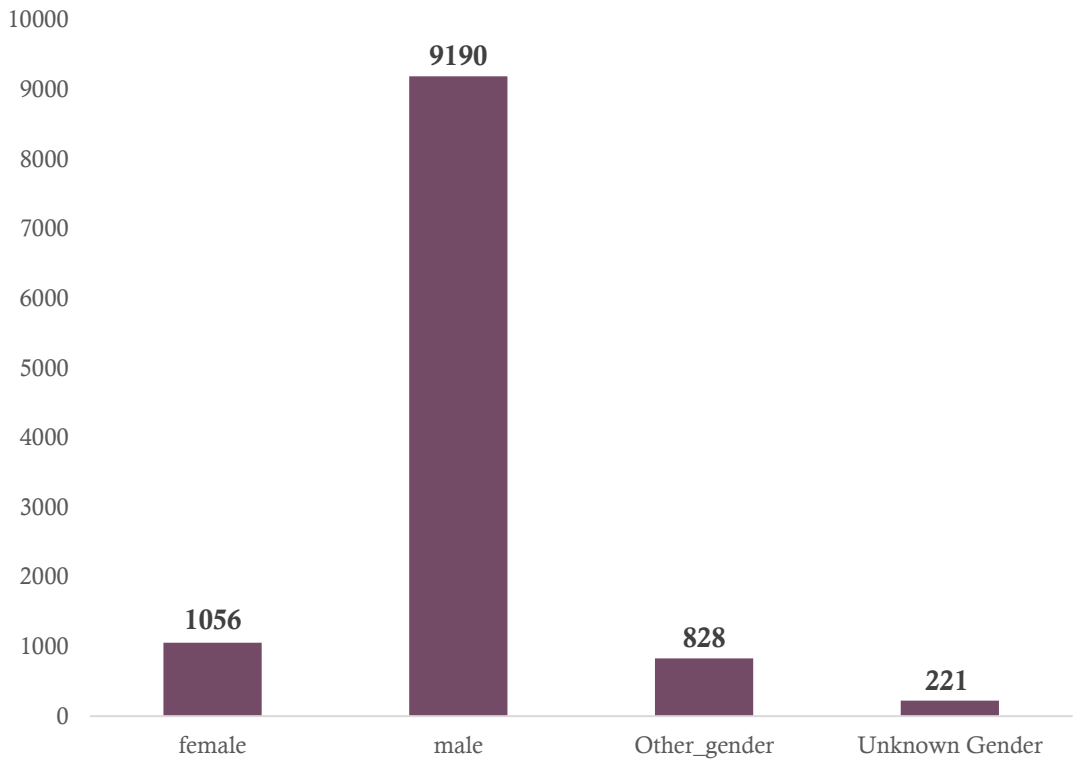


VIEWER DEMOGRAPHICS BY GENDER

Total viewers analysed:
Male: 9190 (82%)
Female: 1056 (9%)
Other: 828(7)
Null: 221(2%)

Male viewers represent 82% of the viewers.
Top-performing content was sport-related, which historically indexes higher with male audiences per industry benchmarks.

Other gender is non-binary and **NULLs** are people who did not specify their gender.



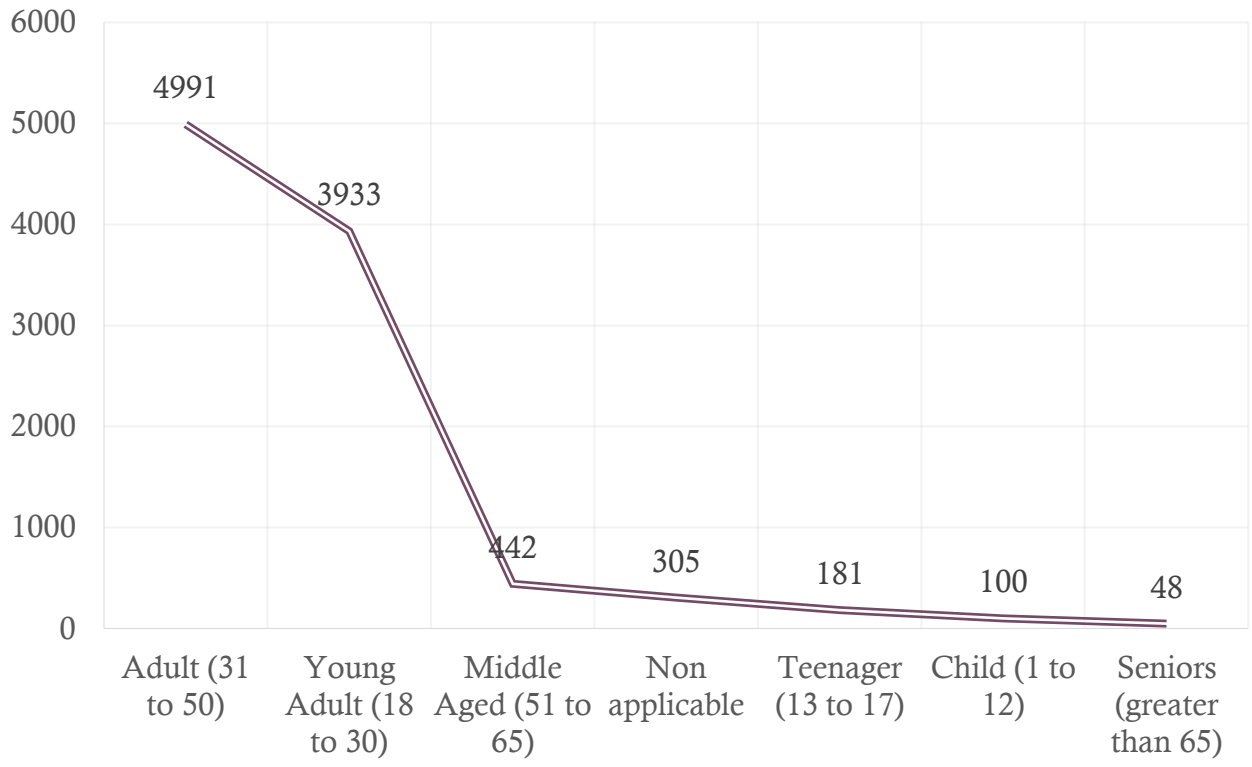
VIEWERSHIP BY AGE

The TRENDLINE clearly shows that the *more people age, the less they watch TV.*

Adults and young adults are leading with 4991 and 3933, respectively

Teenagers views are at 181, might because the get to watch TV on weekends and attending school on weekdays.

Seniors has the lowest number of viewers because they barely watch TV, reasons can be weak eye sight and they sleeping early.

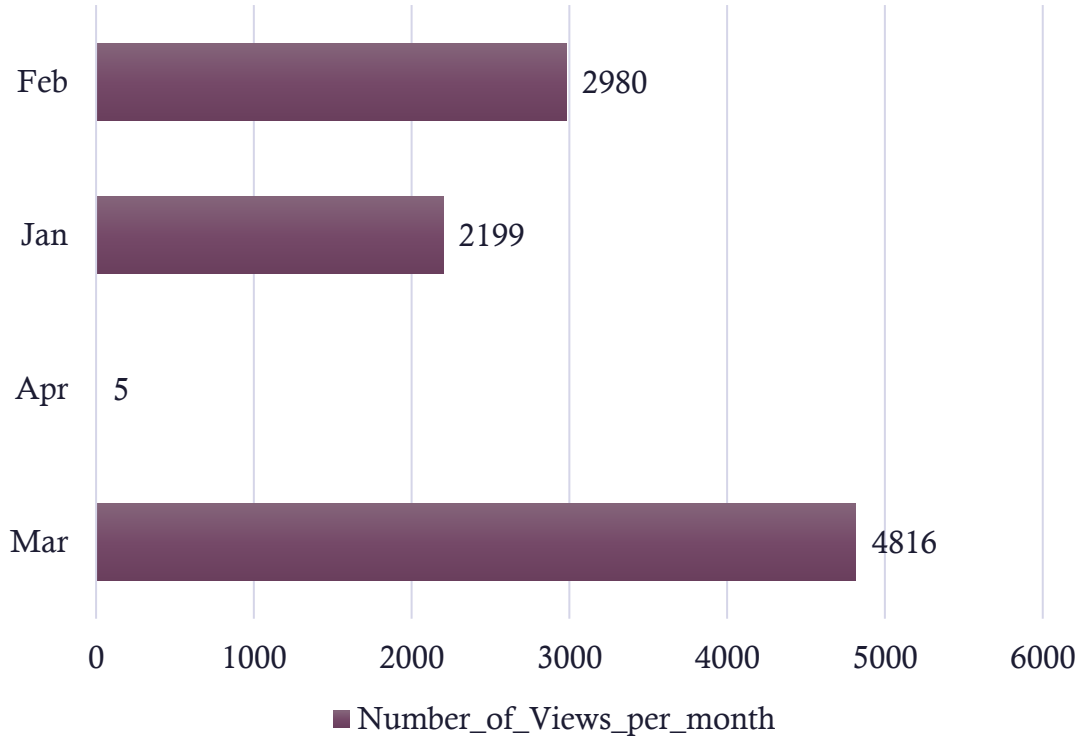


VIEWERSHIP BY MONTH

March has the highest number of viewers, at this case 4816. March has an extremely high viewership for ***sports***.

April has the lowest number of viewers, at this case only 5. This could have happened because of many reasons.

Examples: ***Rise of Digital and Social Media***.
Spring Break and better weather:
Fewer people stay indoors because the majority is outside.

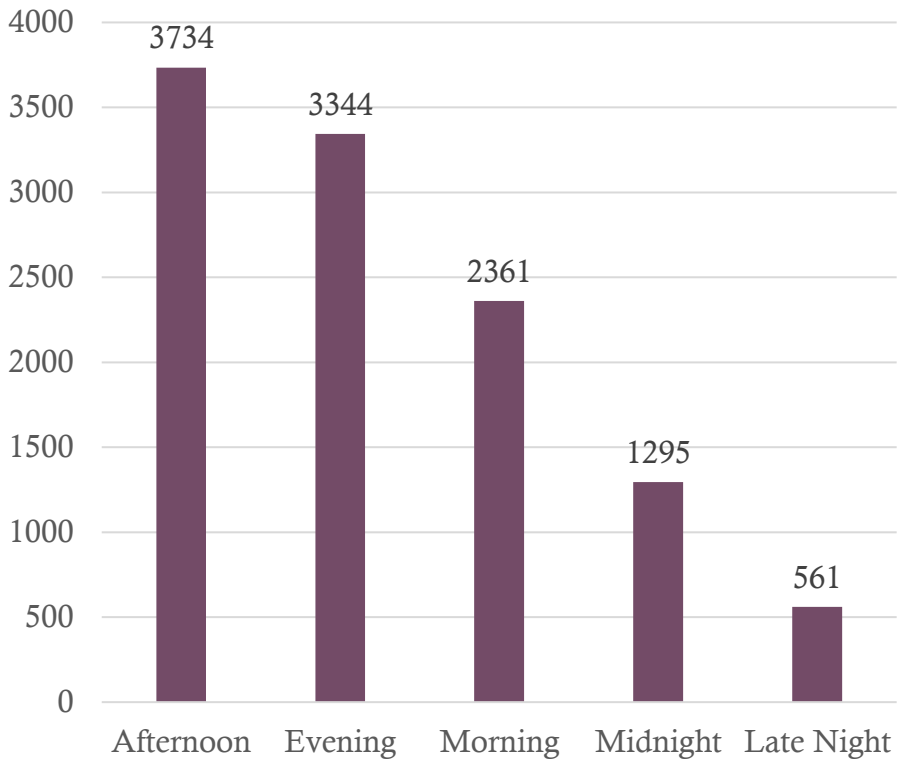


DAILY VIEWERSHIP

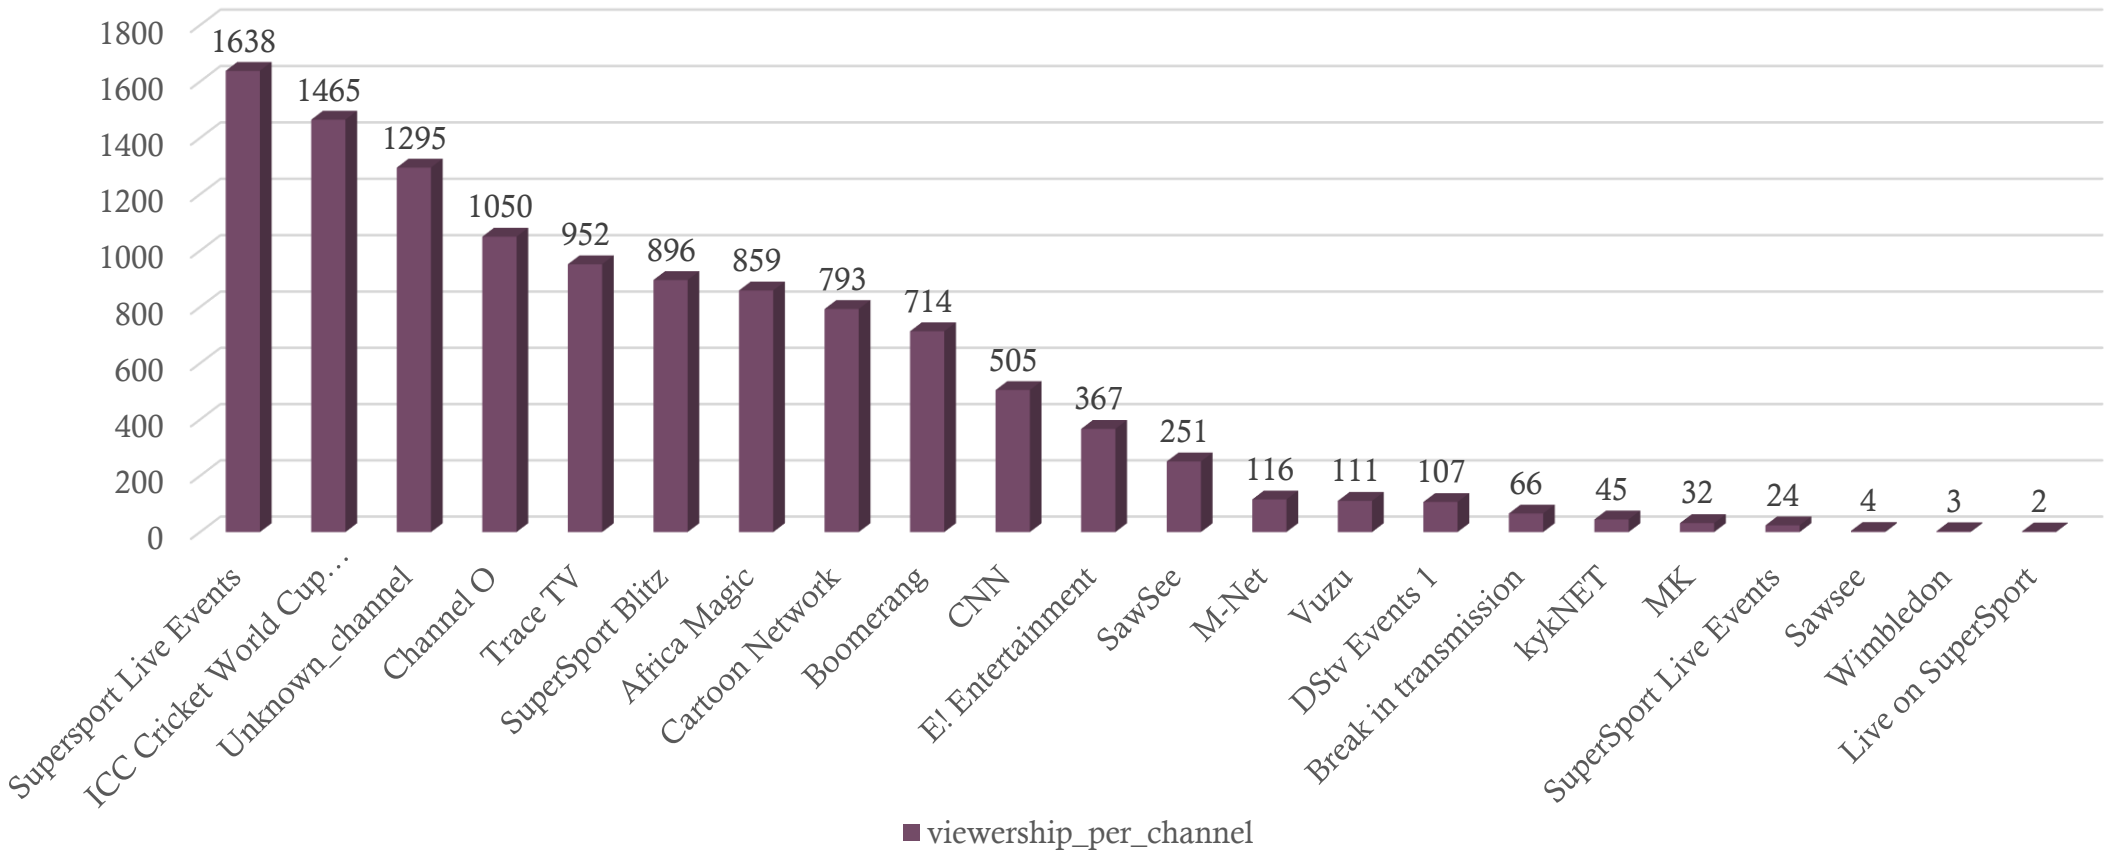
The afternoon slot has the highest number of viewers (3734) because it targets specific demographics who are home, such as homemakers, retires, adults from works and students from school. It is time to relax after a long day.

Late nights has the lowest (561) because most programs have adult-orientated scenes or stronger language.

Midnight viewing at 1295 is because of night shift workers or people with insomnia.

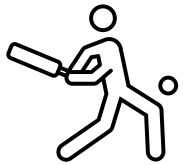


VIEWS PER CHANNEL



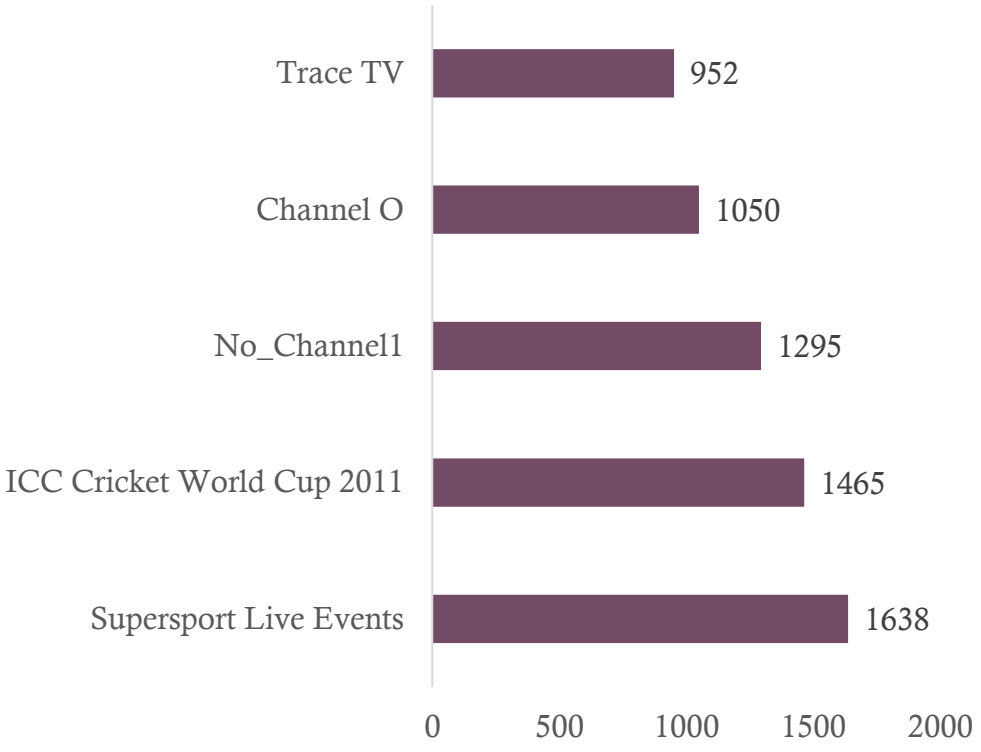
TOP 5 OF MOST WATCHED SHOWS.

SuperSport Live Events is leading with 1638 viewers. This is because it was sport season as ICC **Cricket World Cup** is in the second place with 1465 viewers.



Music shows made 21% of the views.

There is an unknown show that has 1295 viewers.



INSIGHTS

Regional Dominance & Disparities: Gauteng is the strongest market with **3,786 viewers**, a lead attributed to its high population density of roughly 16 million people. Conversely, the **Northern Cape** has the lowest viewership (**236**) due to its significantly smaller population of 1.38 million .

The Age-Viewership Inverse Correlation: There is a clear trendline showing that **as people age, they watch less TV**. While **Adults (4,991 views)** and **Young Adults (3,933 views)** drive the platform, **Teenagers** account for only **181 views**, likely because their viewing is restricted to weekends due to school. **Seniors** have the lowest engagement, often due to health-related factors like weak eyesight or earlier sleep schedules

Monthly Volatility: Viewership peaked dramatically in **March (4,816 views)**, fueled by high interest in sports content. However, there was a massive crash in **April to only 5 viewers**. Potential causes include the rise of **digital and social media** alternatives, as well as **better weather and Spring Break** encouraging people to be outdoors rather than watching TV

Data Gaps: There are significant "unaccounted for" segments, including **1,049 viewers** with no province data and **235 viewers** with no recorded race, which could impact the accuracy of targeted marketing

Diagnostic Synthesis: Factors Influencing Consumption

BrightTV viewership is rigidly governed by three behavioral pillars.

Event-Driven Urgency

Live sports create unmissable appointment viewing that overcomes other distractions, driving massive peaks (as seen in March).

Schedule Availability

Consumption spikes precisely when external obligations end. The Afternoon slot is our stronghold, specifically capturing students and post-work adults.

Environmental Friction

Passive viewing collapses immediately against external competition, such as good weather (Spring Break) or alternative digital media platforms.

Strategic Recommendations: Content & Growth

Initiative I: Stabilize Low-Consumption Days

Event-ize Non-Sports Content

Replicate the 'March Effect' by scheduling high-profile movie premieres or reality finales during anticipated drop-offs like April Spring Break.

Afternoon Retention

Capitalize on the Afternoon peak by deploying high-value cliffhangers to bridge viewers into weaker evening slots.

Senior Adjustments

Introduce accessible programming in earlier slots to capture seniors before physical sleep constraints set in.

Initiative II: Expand the User Base

Digital Integration

Combat the 'April digital flight' by launching a companion app or social co-viewing experiences for the younger demographic.

Gauteng Penetration

Double down on our absolute strongest market with hyper-local acquisition campaigns leveraging the 16M population density.

Weekend Warrior Packages

Create tailored, weekend-only subscription tiers explicitly aimed at teenagers who cannot watch during the week.
